DETAILED ACTION

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Torrente on 12/15/03.

The application has been amended as follows:

ABSTRACT OF THE DISCLOSURE

A driving apparatus includes a rotatable rotor with a ring shape, a first magnetic pole portion, a second magnetic pole portion, and a coil for magnetically exciting the first magnetic pole portion and the second magnetic pole portion. The rotor has magnet portions which are divided along a circumferential direction and differently magnetized.

~~The first magnetic pole portion is formed extending in a direction perpendicular to the rotational axis of the rotor, and faces a face of the magnet portion perpendicular to the rotational axis. The second~~

~~magnetic pole portion sandwiches the magnet portion~~
~~between the second magnetic pole portion and the~~
~~first magnetic pole portion, and faces another face~~
~~of the magnet portion perpendicular to the rotational~~
~~axis.~~ The coil is disposed radially of the rotor.

The condition of $-0.333X + 0.7 > Y$ is satisfied where Y is a ratio of a central angle of each first magnetic pole portion relative to a central angle of each magnetized pole in the magnet portion, and X is a ratio of an outer circumferential length of each magnetized pole in the magnet portion relative to a thickness of the magnet portion in a direction of the rotational axis.

Allowable Subject Matter

Claims 1-9 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art taken either singularity or in combination fails to anticipate or fairly suggest the limitations of the independent claim, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claim 1, with the allowable feature being the

Art Unit: 2873

conditional relationship pertaining to the central angle of the first magnetic pole relative to a central angle of each magnetic pole in the magnetic portion and the outer circumferential length of each magnetized pole. Therefore claims 1-9 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Okuda et al.(U.S. Patent No. 4,899,145), Chen et al.(U.S. Patent No. 5,684,7861) and Japanesse Patent No. 7-107720 are pertinent to the application since they pertain to a magnetic rotor with magnetic poles perpendicular to the rotational axis.
